ABOUT ME

Second-year B.E. (AI & ML) student at BMSIT, Bengaluru, maintaining a 9.2 CGPA while shipping production-grade software. I specialise in full-stack AI applications — from voice-first PWAs and geospatial Android tools to Web3 marketplaces and SQL-heavy delivery platforms — and thrive in cross-functional, demo-driven environments. Nationally recognised at ASTRA Defence Tech Expo 2026 (4th place, 200+ teams) and actively contributing to GirlScript Summer of Code 2026. Seeking an internship to apply my skills in ML, cloud-integrated backends, and scalable product engineering to real industry problems.

EDUCATION

BMS Institute of Technology and Management, Bengaluru

Oct 2024 – Aug 2028 (Expected)

B.E. in Artificial Intelligence & Machine Learning | CGPA: 9.2 / 10

Narayana Institute

Jun 2022 – Mar 2024

PUC – Class XII (Physics, Chemistry, Maths, Computer Science) | 90%

Narayana Institute

Jun 2021 – May 2022

Class X – CBSE | 86%

TECHNICAL SKILLS

Languages

C, C++, Java, Python, Kotlin

Frontend

React, TypeScript, HTML5, CSS3, JavaScript, Tailwind CSS, Vite

AI & Data

ML, scikit-learn, TensorFlow, NumPy, Pandas, Vector DBs, Groq API, Gemini API

Backend & Cloud

Node.js, Express.js, FastAPI, MongoDB, PostgreSQL (PL/pgSQL), MySQL, Firebase, AWS

Cloud (AWS)

EC2, S3, IAM, VPC, RDS, Lambda, CloudWatch, ECS, Route 53, CloudFront

Mobile

Android Studio (Kotlin), PWA, Service Workers, IndexedDB

DevOps & Deploy

Docker, Git, GitHub Actions, Vercel, Render, Netlify, Streamlit

Dev Tools

VS Code, Cursor, Postman, MATLAB, Jupyter, Xilinx, SolidWorks

Design & Editing

Adobe Photoshop, DaVinci Resolve, Canva

PROJECTS

TaskGrid — Web3 Freelance Marketplace

Web3 · Blockchain · Full-Stack · Polygon

Stack: React, TypeScript, Vite, ShadCN UI, Express, Drizzle ORM, PostgreSQL, Solidity, Hardhat, Polygon, SideShift API, OpenAI, Vercel | github.com/praju455/taskGrid

- Architected a decentralised freelance marketplace on Polygon where clients pay in 100+ cryptocurrencies; SideShift API auto-converts all payments to USDC via smart-contract escrow, eliminating platform fees and payment delays — built for the SideShift API Wavehack.
- Implemented Solidity escrow contracts (TaskGridEscrow, 0xE151...) with Hardhat; role-based dashboards, AI-powered job matching and dispute resolution via OpenAI, on-chain proof-of-work NFT minting on job completion, and a standalone crypto-converter tool.

Voice-Controlled GIS Tactical Map

AI · Geospatial · Android · Defence

Stack: Python, Vosk, MapLibre, GraphHopper, Android (Kotlin) | github.com/praju455/Voice-Controlled-GIS

- Built a fully offline Android app for military field operations with on-device voice commands (Vosk), raster offline maps (MapLibre), turn-by-turn routing (GraphHopper), live GPS, auto-rerouting, and real-time mesh sync over local Wi-Fi — zero internet dependency.
- Won 4th place nationally at ASTRA Defence Tech Expo 2026 out of 200+ teams; led Team Veer Rakshak (5 members), delegated subsystems, managed timelines, and presented to a defence and tech expert panel.

PolyX — Gasless On-Chain Social Network

Web3 · Blockchain · TypeScript

Stack: TypeScript, React, Polygon blockchain | github.com/praju455/PolyX

- Designed and implemented a decentralised social network on Polygon with gasless transactions, on-chain content ownership, and a clean React frontend — demonstrating full-stack Web3 architecture including smart contract integration and wallet-based

authentication.

CraveBite — SQL-First Full-Stack Food Delivery Platform

Full-Stack · PostgreSQL · Docker

Stack: React, TypeScript, Vite, Tailwind CSS, Node.js, Express, PostgreSQL, PL/pgSQL, Docker, JWT, Vercel |

github.com/praju455/cravebite

- Designed a fully normalised PostgreSQL schema (no ORM) with stored procedures, triggers, views, and constraints as core business logic; admin KPI analytics dashboard via SQL aggregation and automated rating updates on review insert and order completion.
- Seeded a realistic Bangalore food-delivery dataset; containerised with Docker Compose and deployed on Vercel with JWT-protected API routes.

Bhumi — Voice-First AI Companion for Elderly Indians

AI · Healthcare · PWA

Stack: React, TypeScript, FastAPI, MongoDB Atlas, Groq, Gemini, ElevenLabs, Whisper, Twilio, Vercel, Render |

github.com/praju455/elderlyminds

- Engineered a multilingual voice-first PWA for 7 Indian languages with zero-typing UX; integrated rPPG-based pulse estimation, mood detection, medicine reminders, and emergency SOS via Twilio with weekly auto-generated PDF health reports.
- Architected 5 FastAPI microservices with dual LLM failover (Groq + Gemini) and full offline support via service workers + IndexedDB; led a team of 4 across module delegation, timelines, and live demos.

CERTIFICATIONS & PROGRAMS

- NPTEL Certification — Machine Learning

IIT / NPTEL

- AWS Free Course — Certificate of Excellence (17 Modules, 33 Video Tutorials)

Scaler Topics | Jan 2025

- Full Stack Web Development Bootcamp — Delta & Alpha Batch

Apna College

OPEN SOURCE CONTRIBUTIONS

- **GirlScript Summer of Code (GSSoC) 2026** — Active contributor to community-driven projects across AI, full-stack web development, and developer tooling; collaborating with maintainers through pull requests, issue triage, and code reviews.

HACKATHONS, LEADERSHIP & ACHIEVEMENTS

- **ASTRA Defence Tech Expo 2026 — 4th Place (National):** Led Team Veer Rakshak (5 members) among 350+ participants and 200+ teams; architected the system, delegated subsystems, managed sprint timelines, and delivered the final pitch to a defence and technology expert panel.
- **National & College-Level Hackathons (2024–2026):** Consistent participant and top finisher in AI, full-stack, and geospatial tracks across multiple institutions; demonstrated ability to scope, build, and demo under pressure with cross-functional teams.
- **Technical Communication:** Strong public speaker presenting to academic panels, industry experts, and evaluation juries; recognised for structured demos, clarity, and professional delivery.

INTERESTS

EA Sports & competitive gaming · Anime · Cricket · Photo & video editing (Photoshop, DaVinci Resolve) · Open-source · Visual storytelling · Defence technology · Geospatial systems · Web3 & blockchain
